

# Colenta<sup>®</sup> Medical X-Ray Radiography

## CR/DR DX Easy Imaging Retrofit Kits

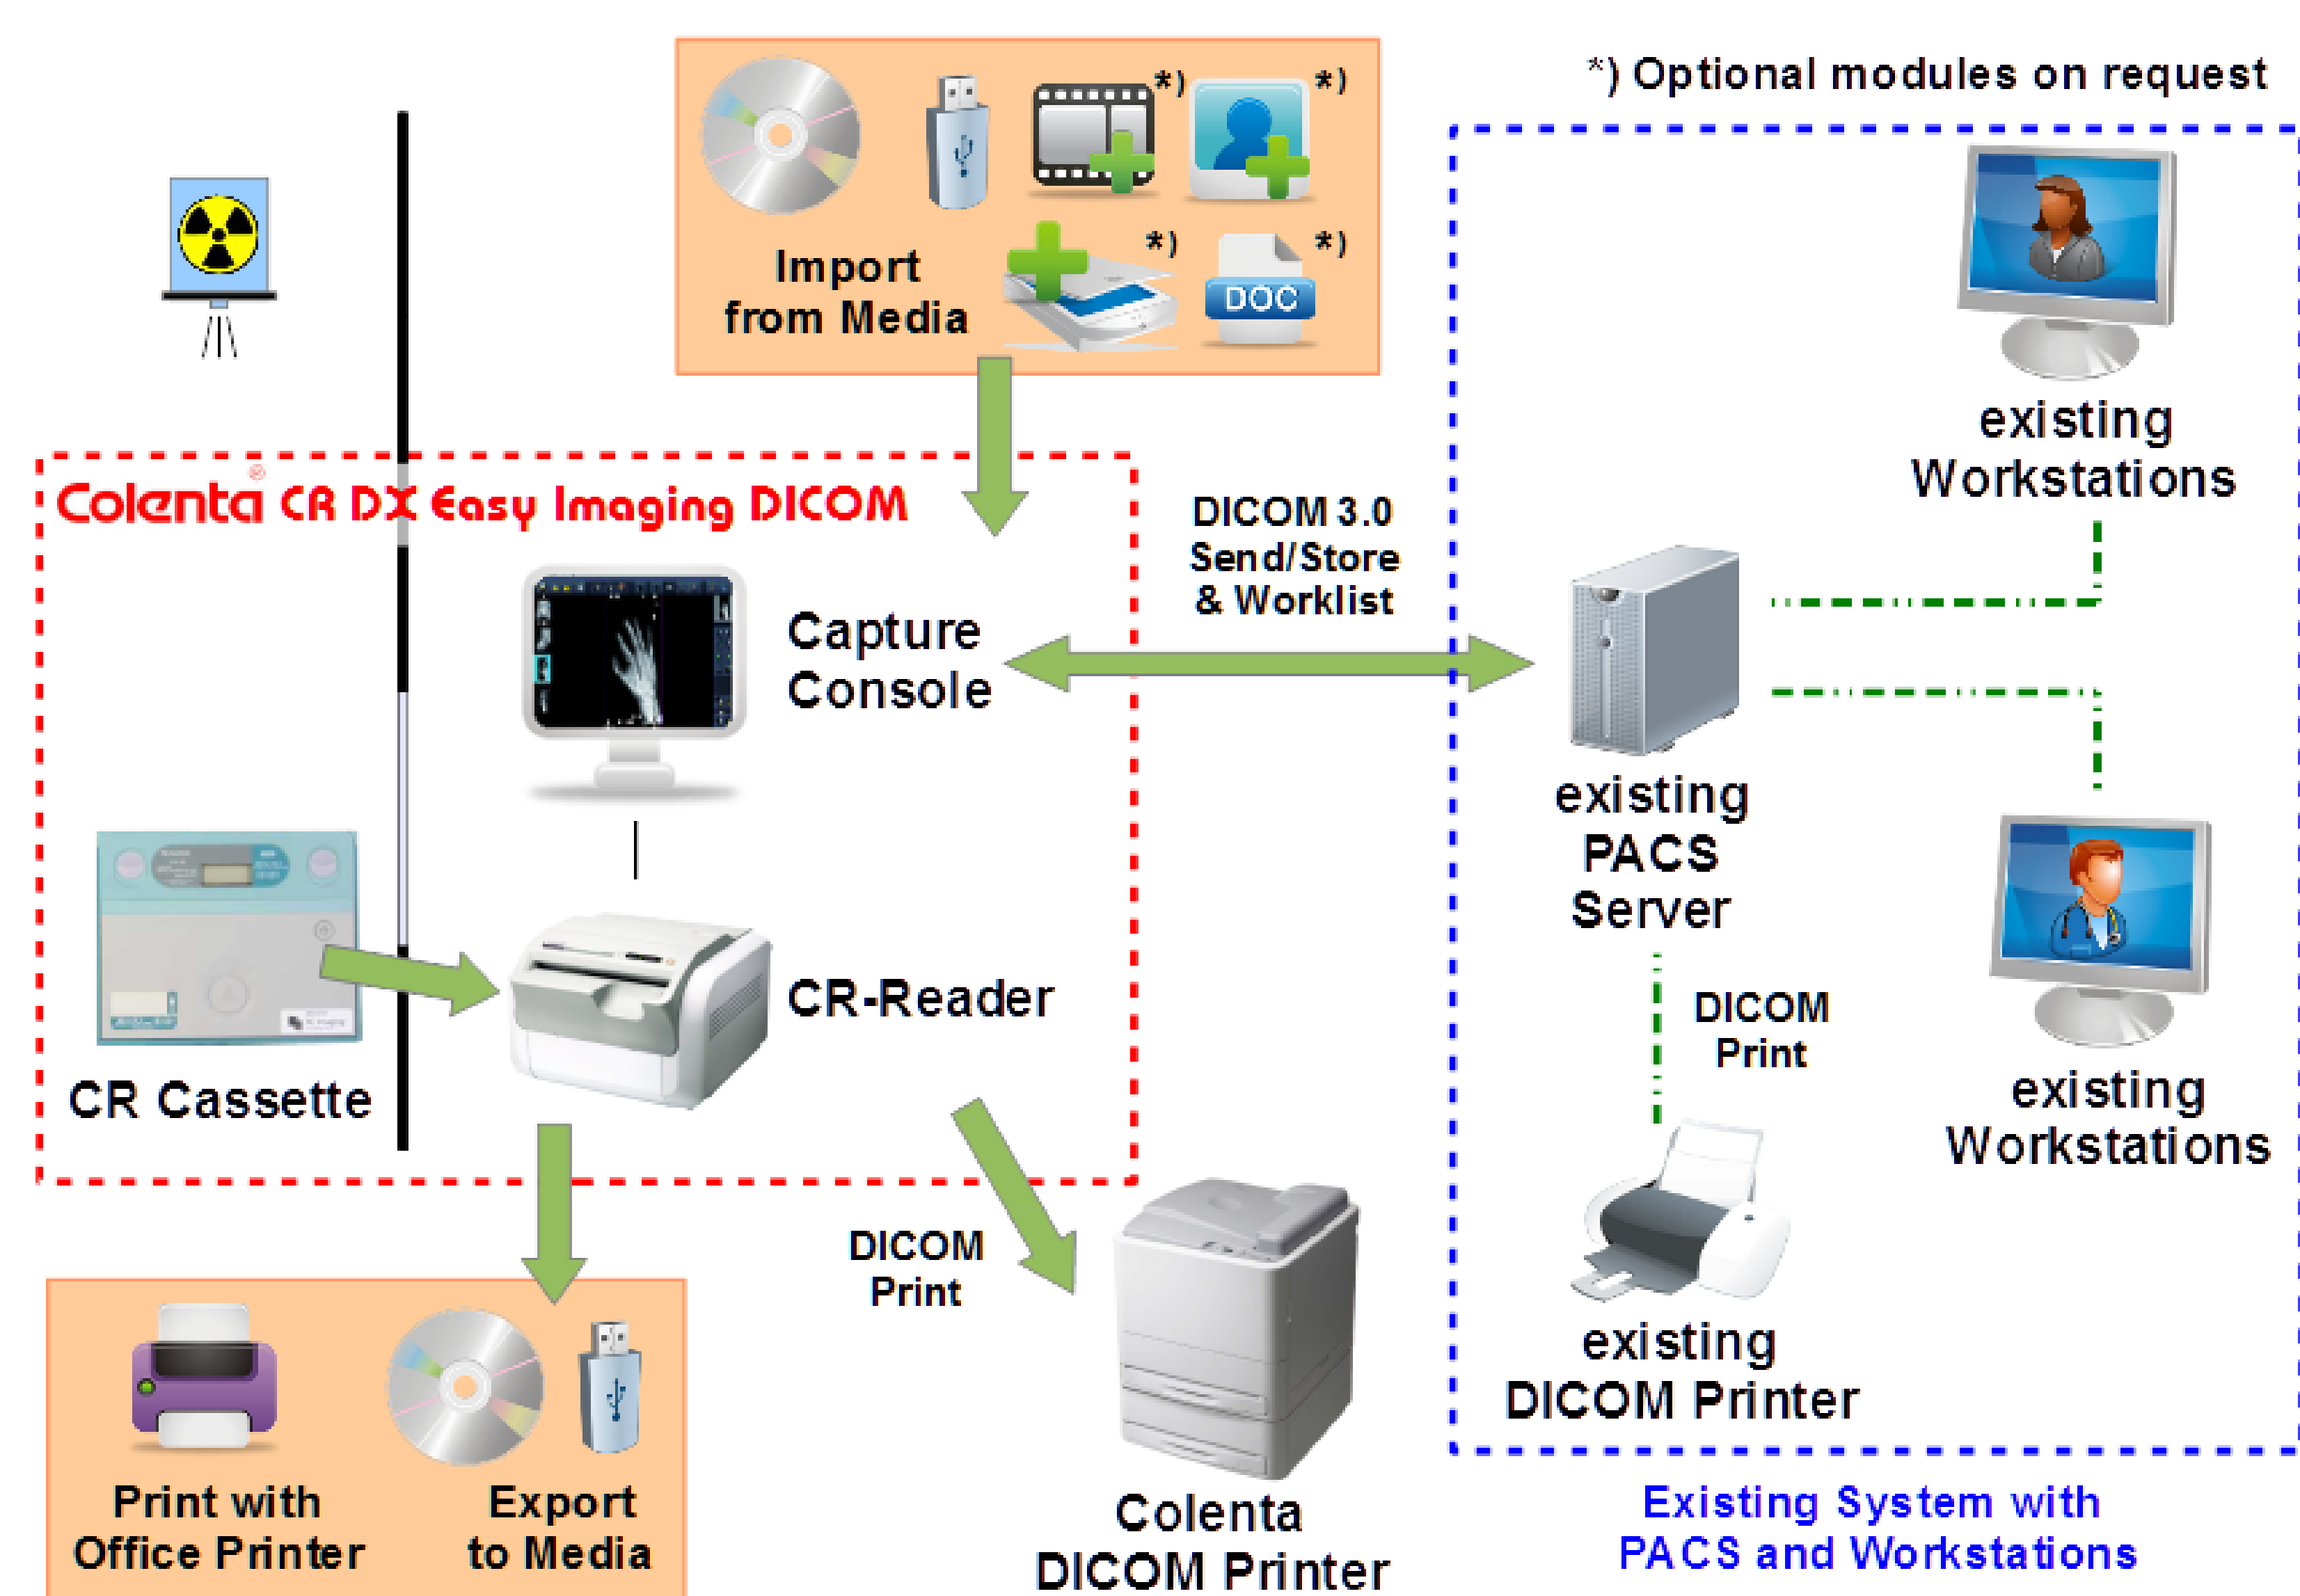

### BASIC Configuration

This Configuration includes general functions of the **DX-Easy Imaging Processing Software** to enhance the Images.

The **DICOM Print** Module enables to print out the diagnosis related images by means of the **COLENTA Dry Laser Film Imager** onto Dry Imaging Film for keeping in the patient file.

### DICOM Configuration

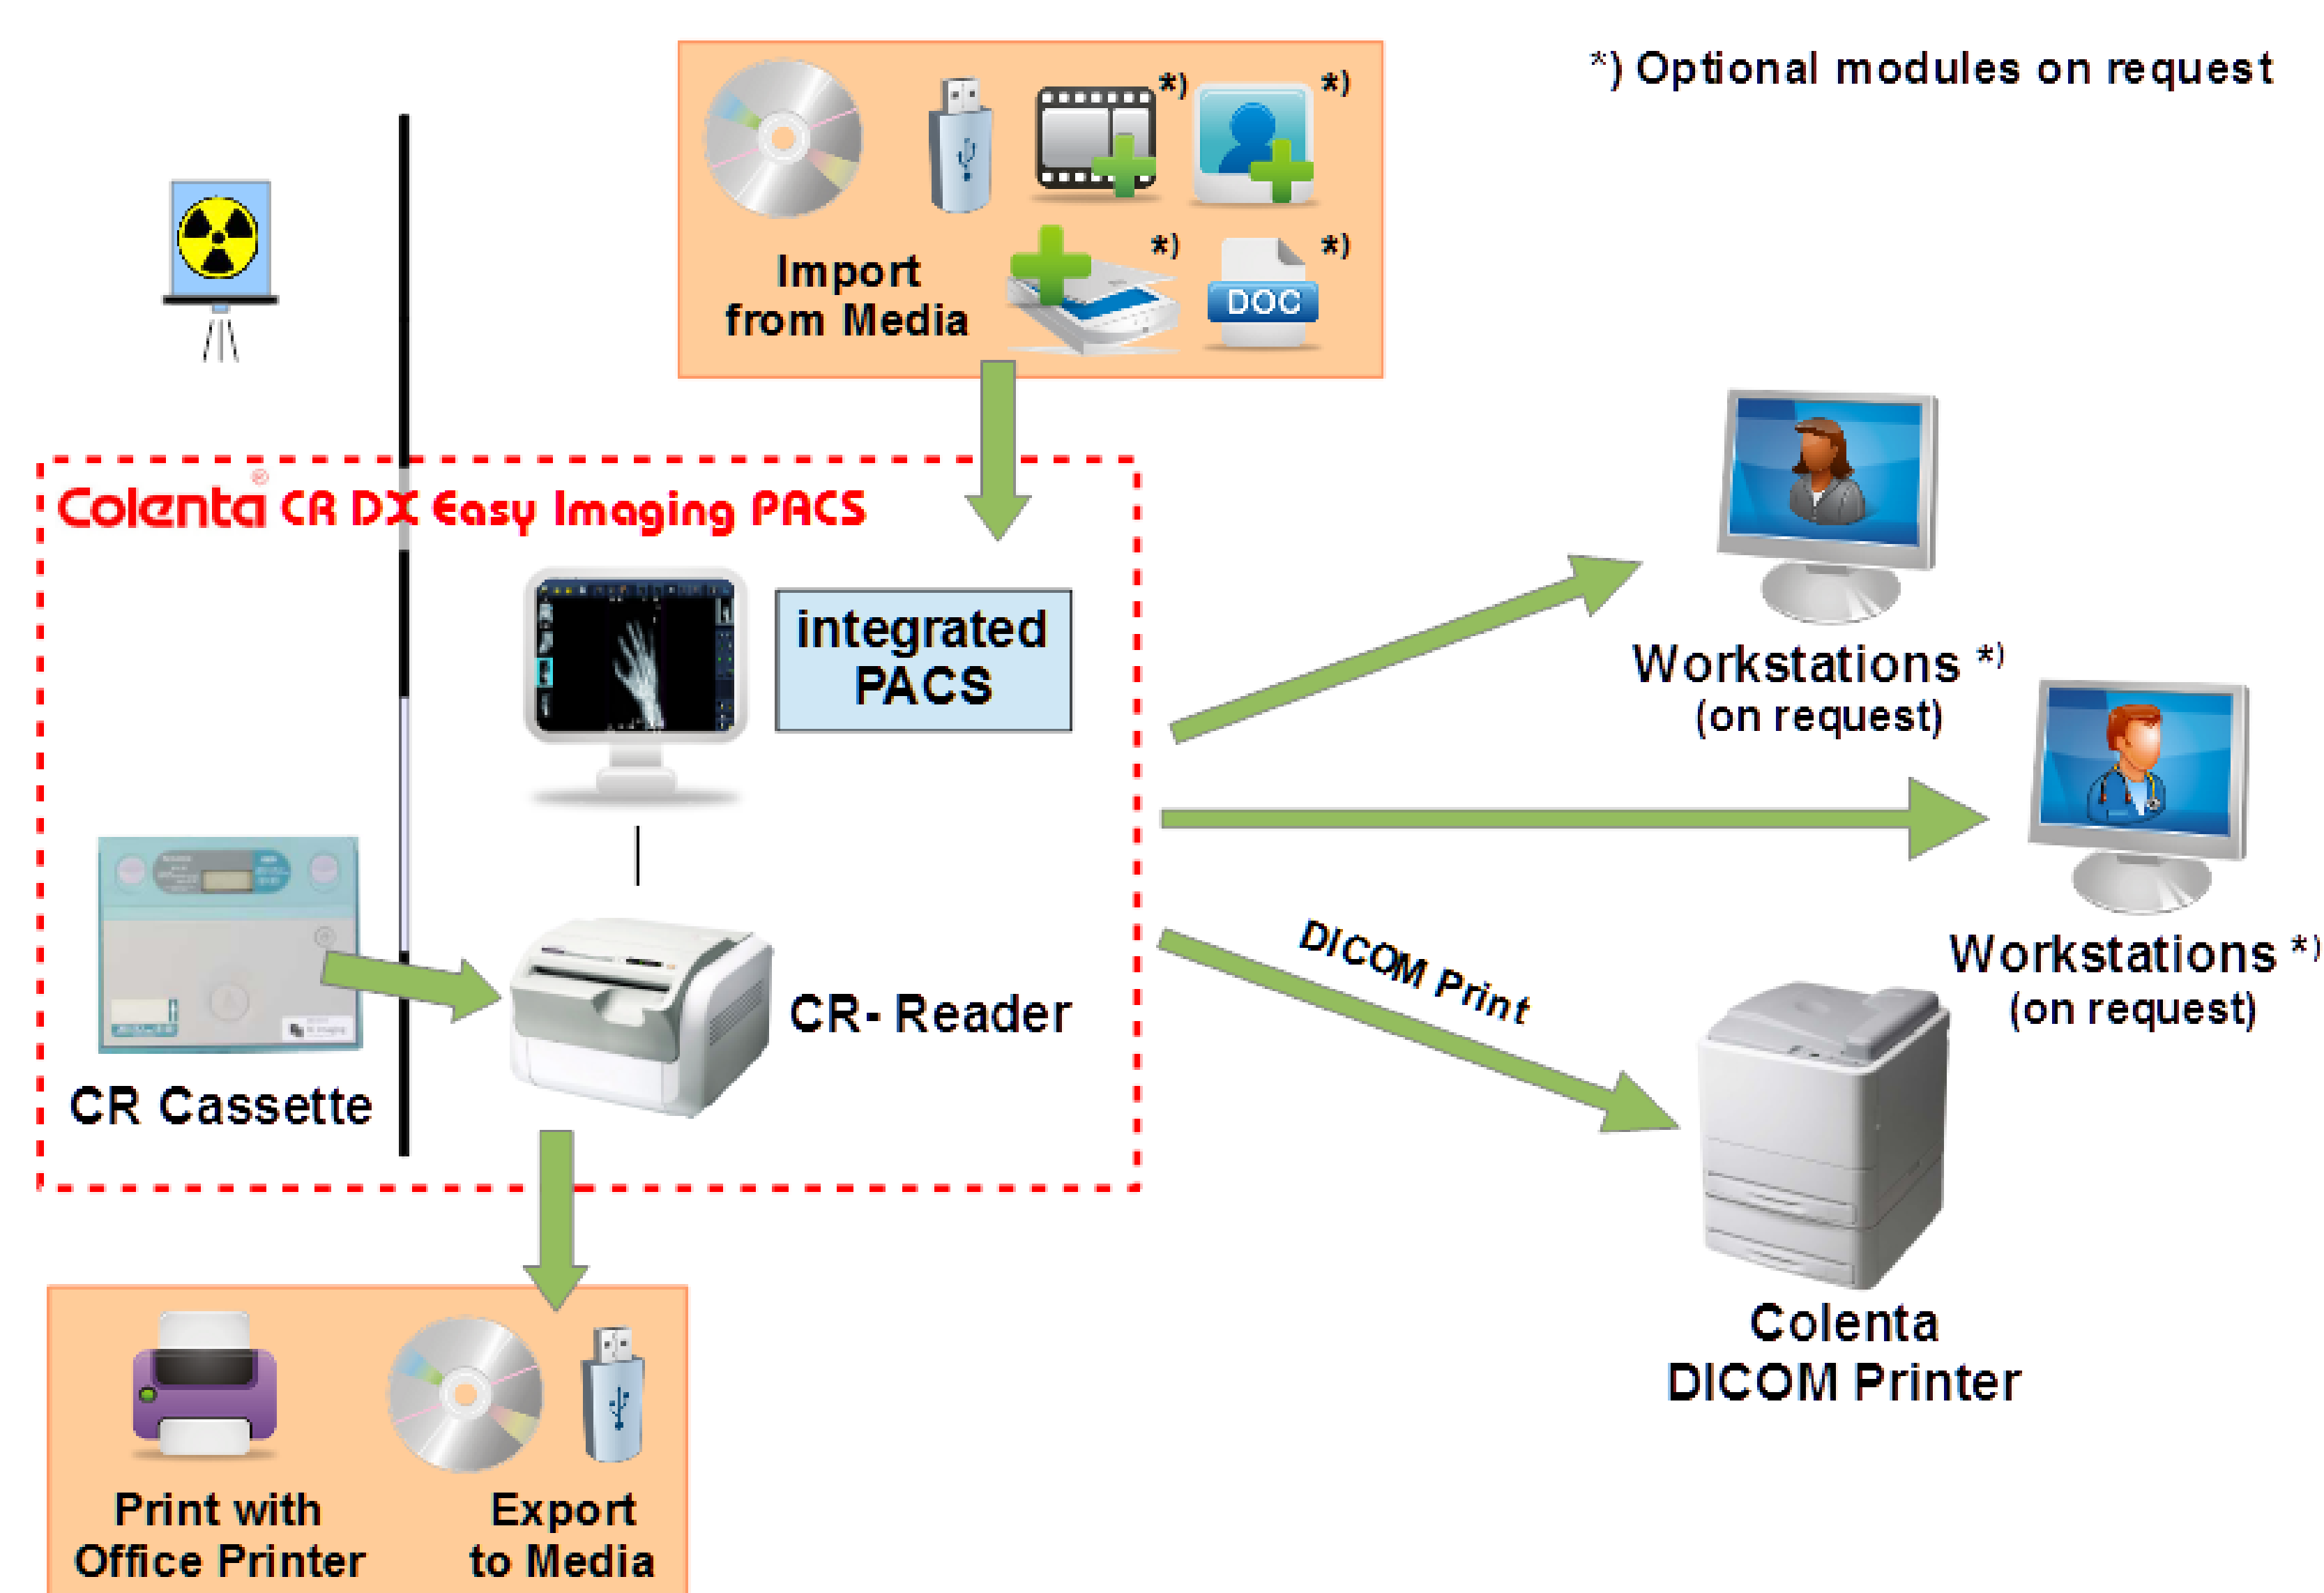

This Configuration includes general functions of the **DX-Easy Imaging Processing Software** to enhance the Images.

Optional Modules are available to **import data** from different devices and add it to the patient file.

When an **IT-System** with a **PACS Server** is already in use, this Configuration can be easily implemented in an existing system.

### Integrated PACS Configuration

This Configuration includes general functions of the **DX-Easy Imaging Processing Software** to enhance the Images.

This Configuration allows to set up a complete independently working IT-System in the x-ray department, including **Image Archiving facility** and connection of additional **Workstations**.
